

Luca Alfino

ChatGPT – 20/11/2025

I have used ChatGPT to help me format the README properly for readability on GitHub.

Google Gemini – 22/11/2025

I find Google Gemini to be useful in writing code snippets for functions/quick short code. Hence, I utilised it for variables/functions:

- merged_df_police_press (Lambda expression comparison)
- assign_tags function (Extract top 5 tags and their freq from first dataset)

ChatGPT – 23/11/2025

I took ChatGPT's advice on which vectorizer function works best for our case scenario.

Luca D'Ascari

This work was completed using a mix of AI tools to support structure, quality assurance, and writing clarity. GPT was used primarily to help structure Notebooks 3 and 4 into a report-style narrative aligned with the assignment brief, including shaping the comparative evaluation flow, drafting shortened markdown sections, and refining wording so that claims matched the quantitative outputs. Gemini was used as a secondary tool to cross-check section completeness against the brief and to sanity check whether the interpretations were consistent with the reported metrics, plots, and significance testing.

Where AI suggestions influenced decisions, the final choices were still implemented and validated inside the notebook through reproducible code and outputs rather than accepted as unverified text. An honourable mention is Grammarly, which was used during the final polishing stage to correct grammar and improve written British English readability without changing the underlying technical meaning.

Luke Cardona

I have made use of the AI tools to aid in clarity of the code and to summarise papers. ChatGPT and Gemini were used to aid in structuring the code and to aid in the creation of the appropriate figures and organising the figures for the EDA.

Notebook LLM was used to summarise the papers at first to filter out the papers and knowledge. Chat GPT was used to aid in writing the markdown for the Notebook. This was done by giving the LLM a list of bullet points and then prompting the LLM to give the bullet points in a structured paragraph.
